

Algorithms, AI & Data Science II

Prof. Dr. Ingo Scholtes

Chair of Machine Learning for Complex Networks
Center for Artificial Intelligence and Data Science (CAIDAS)
Julius-Maximilians-Universität Würzburg

ingo.scholtes@uni-wuerzburg.de

Notes:

- **Lecture L21: Summary and Outlook** 21.07.2025
- **Educational objective:** We summarize the course, give an outlook to advanced topics that you can study in follow-up courses and textbooks, and discuss the results of the lecture evaluation.
- **Handout version:** 2025/06/24 15:27:41

Motivation

```
1: neural_net ← ∅ //Neural Network
2: neural ←  $\{x_{ij}$  : instances visited by P0}
3: repeat
4:   neural ← single_instance(P, neural)
5:   If is_neural_net(P) then
6:     neural_net ← neural_net ∪ {neural}
7:      $x ← x + 1$ 
8:   until  $x \leq 0$ 
9: clusters ← ∅ //K-Means Clustering
10:  $g' ← g$ 
11: while (clusters) < N do
12:   candidate ← choose_from(neural_net, K)
13:   If is_neural_candidate(T) then
14:     clusters ← clusters ∪ {candidate}
15:   else
16:      $g' ← g' - 1$ 
17:   If  $g' < 0$  then
18:      $k ← \lfloor N/2 \rfloor$ 
19:     If  $k > 0$  then
20:       return clusters
21:    $g' ← g$ 
22: return clusters
```

Notes:

Inductive vs. deductive reasoning

- ▶ extending the simplistic view given in the motivation, we considered both **inductive and deductive methods of knowledge extraction**
- ▶ **deductive approaches** include symbolic AI like, e.g., logical inference
- ▶ **inductive approaches** include statistical inference and machine learning
- ▶ inductive approaches to AI have recently become much more common (and successful)
- ▶ but: **both approaches have their justification in AI**

Notes:

Algorithms, AI, and Data Science II

Notes:

Part I - Logics, Reasoning, and Computation

- ▶ L01 - Motivation → 28.04.2025
- ▶ L02 - Formal Foundations of Computing → 30.04.2025
- ▶ L03 - Word Problems and Automata → 05.05.2025
- ▶ L04 - Turing Machines and Computability → 06.05.2025
- ▶ L05 - Propositional Logic and Boolean Algebra → 14.05.2025
- ▶ L06 - Satisfiability in Propositional Logic → 19.05.2025
- ▶ L07 - Logical Inference → 21.05.2025
- ▶ L08 - First-Order Logic → 26.05.2025

Part II - From Logical to Probabilistic Reasoning

- ▶ L09 - Probabilistic Foundations → 28.05.2025
- ▶ L10 - Statistical Modelling and Inference → 11.06.2025
- ▶ L11 - Bayesian Inference → 16.06.2025
- ▶ L12 - Hypothesis Testing → 18.06.2025
- ▶ L13 - Challenges in Data Science → 23.06.2025

Sir Arthur Conan Doyle

1859 – 1930

logical inference

“He was, I take it, the most perfect reasoning and observing machine that the world has seen [...].”

→ Sherlock Holmes, *A Scandal in Bohemia*

Notes:

Part III - Information, Compression, Pattern Recognition

- ▶ L14 - Markov Chains and Random Walks → 25.06.2025
- ▶ L15 - Markov Chain Convergence and PageRank → 30.06.2025
- ▶ L16 - Markov Chain Monte Carlo → 02.07.2025
- ▶ L17 - Information Theory and Data Compression → 07.07.2025
- ▶ L18 - Description Length Minimization → 09.07.2025

Part IV - Graphs and Topology

- ▶ L19 - Graphs, Laplacians and Minimum Cuts → 14.07.2025
- ▶ L20 - Flow Maximization in Graphs → 16.07.2025
- ▶ L21 - Summary and Conclusion → 21.07.2025

Notes:

Is that all there is to know?

Isaac Newton

image credit: Portrait of Isaac Newton by Godfrey Kneller, public domain

“What we know is a drop. What we do not know is an ocean.”

Isaac Newton

Notes:

Outlook: Formal languages and NLP

- ▶ in L02 and L03 we introduced **formal languages and formal grammars**
- ▶ **Chomsky hierarchy** is foundation for **computational linguistics and natural language processing**
- ▶ we studied which automata models are needed to solve **word decision problems** for different formal languages

further topics

- ▶ regular expressions and **Kleene's theorem**
 - ▶ **pumping lemma** for regular and context-free languages
 - ▶ **Backus-Naur** form for context-free grammars
 - ▶ **CYK algorithm** for context-free languages in Backus-Naur form
-
- ▶ see course **Theoretische Informatik** (Prof. Glasser)

Chomsky hierarchy with automata models that solve word decision problem → L03

Notes:

Outlook: Automata, computability, and complexity

- ▶ in L03 we explored different **automata models** to solve word decision problems
- ▶ in L04 we introduced (universal) **Turing machines** as basis for our notion of **computability**

further topics

- ▶ **LOOP, WHILE, GOTO-computability**
 - ▶ **primitive recursive** and μ -recursive functions
 - ▶ **Ackermann function**
 - ▶ **Post's correspondence problem**
 - ▶ **Gödel's incompleteness theorem**
 - ▶ P, NP, **NP-completeness**, and reducibility
-
- ▶ see courses **Theoretische Informatik** and **Berechenbarkeitstheorie** (Prof. Glasser)

infinite tape

Turing machine → L03

Notes:

Outlook: From first- to higher-order logic

- ▶ In L05 we introduced **propositional and first-order logic**
- ▶ in L06 and L08 we studied the **satisfiability problem** in propositional and first-order logic
- ▶ in L07 and L08 we explored **logical inference** in propositional and first-order logic

further topics

- ▶ **unification algorithm** for first-order inference
 - ▶ **backward chaining** in first-order logic
 - ▶ **higher-order and modal logic**
 - ▶ **knowledge representation** and **ontologies**
 - ▶ **logic programming** and **PROLOG**
-
- ▶ see course **Logik für Informatiker** (Prof. Seipel)

$$(X_0 \vee X_1 \vee X_2) \wedge (\neg X_1 \vee \neg X_2) \wedge X_0 \wedge \neg X_0$$

resolution algorithm

```
procedure RESOLUTION( $F$ )  
  choose  $X$  that also appears as  $\neg X$  in  $F$   
  for clauses  $c_i$  with  $X \in c_i$  do  
    for clauses  $c_j$  with  $\neg X \in c_j$  do  
       $r \leftarrow c_i - \{X\} \vee c_j - \{\neg X\}$   
       $F \leftarrow \text{add\_clause}(F, r)$   
    end for  
  end for  
  for clauses  $c_i$  with  $X \in c_i$  or  $\neg X \in c_i$  do  
     $F \leftarrow \text{remove\_clause}(F, c_i)$   
  end for  
end procedure
```

→ L06

Notes:

Outlook: Pattern recognition and dimensionality reduction

- ▶ in L09 – L11 we introduced foundations of **statistical modelling** as well as **frequentist and Bayesian inference**
- ▶ in L11 we took a statistical inference perspective on **linear regression**
- ▶ in L12 – L13 we explored **hypothesis testing in data**

further topics

- ▶ **MCMC sampling** in Bayesian inference
 - ▶ **expectation maximization** for inference with hidden variables
 - ▶ cluster detection with **gaussian mixture model** and **DBSCAN**
 - ▶ classification with **logistic regression** and **neural networks**
 - ▶ dimensionality reduction with **principal component analysis** (PCA), **singular value decomposition** (SVD), or **t-SNE**
-
- ▶ see courses **Introduction to Artificial Intelligence** (Prof. d'Eramo) and **Data Mining** (Prof. Hotho)

linear regression → L11

Notes:

Outlook: Probabilistic graphical models

- ▶ in L14 and L15 we introduced **Markov models** as model for **stochastic processes**
- ▶ in L16 we considered **algorithmic applications** of Markov chains
- ▶ in L13 we considered **causal diagrams** where directed edges capture causal relationships

further topics

- ▶ **higher-order** Markov models
 - ▶ **hidden Markov models** (HMM)
 - ▶ **inference** for Markov chains
 - ▶ **Bayesian networks** and **causal inference**
 - ▶ temporal models: **Kalman filters** and **dynamic Bayesian networks**
-
- ▶ see courses **Data Mining** and **Time Series and Anomaly Detection** (Prof. Hotho)

graph representation of Markov chain with two states A and E

→ L13

Notes:

Outlook: Graph algorithms and graph learning

- ▶ in L18 we explored **cluster detection in graphs**
- ▶ in L19 studied graph Laplacians and **minimal cuts**
- ▶ in L20 we explored the Ford-Fulkerson method for **flow maximization** and proved the **max-flow min-cut theorem**

further topics

- ▶ **maximum matchings** in (bipartite) graphs
 - ▶ **graph coloring** and labeling problems
 - ▶ **graph drawing** algorithms
 - ▶ **minimum spanning trees**
 - ▶ **traveling salesman** problem (NP-complete)
-
- ▶ see course **Algorithmische Graphentheorie** (Prof. Wolff), **Statistical Network Analysis** and **Machine Learning for Complex Networks** (Prof. Scholtes)

00|00|10|01|11|01|10|...0100|01|10|11|00|...1000|...

flow compression with InfoMap → L17

Notes:

Outlook: Algorithmic geometry

- ▶ in our course, we did not consider specific **algorithms for geometric problems**
- ▶ algorithms for geometric problems are important in **computer graphics, robotics, and point cloud processing**

further topics

- ▶ **Voronoi diagrams**
 - ▶ **Delaunay triangulation**
 - ▶ **convex hull computation**
 - ▶ **closest pair calculation**
-
- ▶ see course **Algorithmische Geometrie** (Dr. Klemz)

Information on final exam

Q & A Session

today!

We answer questions that you identified during the exam preparation and offer to repeat selected parts of the lectures.

Final Exam

23.07.2025

- ▶ **Wednesday, July 23rd 2025**, from **14:30 - 16:30**, Turing lecture hall
- ▶ written, **closed-book exam** of 120 minutes
- ▶ no specific python questions (only “pseudocode” level)
- ▶ approx. 30 mins worth of **multiple-choice questions**
- ▶ approx. 90 minutes worth of open answer questions
- ▶ you can bring a **hand-written double-sided A4 “cheat” sheet**
- ▶ please **bring a copy of your exam registration** (registration number needed for exam cover sheet)

image credit: Randall Munroe, CC-BY-SA 2.5

Notes:

Thank you!

- ▶ we covered basic foundations of **algorithms, AI, and data science**
- ▶ we **implemented and explored** them in python

some statistics

- ▶ **21 lectures** with **540 slides** generated by **33,255 lines of LaTeX code**
 - ▶ **7200 lines of python code** producing **734 figures and illustrations**
 - ▶ **32 group exercises**
 - ▶ practice sessions with **42 jupyter notebooks**
-
- ▶ a **complete script is available** on WueCampus
 - ▶ **thank you** for your attention and active participation!
 - ▶ we hope to see many of you in **further courses, seminars, or your BSc thesis!**

Notes:
